

Module 33 - for...of Loop with Generator Function

1. What is for...of Loop?

The for...of loop is used to iterate over iterable objects such as arrays, strings, and generator objects. It returns one value at a time.

Example Code:

I. for...of Loop with Array

```
let arr = [10, 100, 1000, 10000];  
  
// 'for...of' accesses each array element one by one.  
for (let val of arr) {  
    console.log(val);  
}
```

II. for...of Loop with String

```
let str = "Javascript";  
  
// 'for...of' accesses each character of the string one by one.  
for (let char of str) {  
    console.log(char);  
}
```

III. for...of Loop with Generator Function

```
// Generator function that yields one value at a time.  
function* genFunction() {  
    yield "One";  
    yield "Two";  
    yield "Three";  
}  
  
// Creates a generator object.  
let iterator = genFunction();  
  
// 'for...of' automatically gets each yielded value until the generator ends.  
for (let val of iterator) {  
    console.log(val);  
}
```
